SUMMARY

Full-stack TypeScript engineer — Angular on the front end, Node and GraphQL on the back, plus Rails where it fits — with seven years as Sympliact's founding engineer and consulting across health-tech, government, insurance, and B2B SaaS. I care about clean architecture, automated quality gates, and shipping fast without breaking trust.

EXPERIENCE

Founding Engineer / Lead Full-Stack Engineer — Sympliact, Inc

Feb 2019 – Present · Part-time · Remote

- Architected and delivered a healthcare platform from an empty repo to production, owning the entire frontend.
- Built Angular Practice & Patient PWAs on a shared NgRx state architecture — typed GraphQL client, Rails API, Auth0 SSO — driving 4,200+ self-service patient sign-ups across 45 states and 260+ active practice staff.
- Established CI/CD and quality gates on unit and Playwright integration tests — with automated QA running the Playwright suite both mocked (no backend) and live — for a safe, low-regression release cadence.
- Keep the platform reliably online under real patient and practice load — near-zero major downtime and zero unhandled fatal errors across both apps last quarter (Sentry) — run solo and part-time.

Angular · TypeScript · NgRx · Rails · GraphQL · PostgreSQL · Playwright

Senior Full-Stack Engineer — Consultant / Self-Employed

Feb 2019 – Present · Contract · Remote

- Confidential government client — air-gapped, on-prem generative-AI chat platform in Angular (Gemini-style) with real-time streaming, MCP tool integrations, and usage analytics.
- Insurance & retirement client — multi-tenant communications hub managing email content across business lines, with preview rendering, versioned templates, and governed approvals; led product/UX and built the Angular frontend, CI/CD, and AWS CDK infrastructure.

Angular · TypeScript · SSE Streaming · MCP · Playwright · AWS CDK · Datadog

Lead Full-Stack Engineer · Consultant — Hexa Containment

Apr 2022 – Nov 2025 · Contract · Remote

- Architected a Rails + Angular shipment & order-management platform that automated $1M+ in annual inventory operations.
- Launched a customer self-serve portal replacing manual phone ordering — $100K+ in online transactions — plus a loyalty feature generating $15K+ in repeat business.
- Built an AWS email-parsing pipeline that ingests order emails and auto-generates shipping options, and directed development of a Next.js closed B2B marketplace.

Rails · Angular · Next.js · AWS · PostgreSQL

Earlier Roles — Otus · Airvel · axialHealthcare

Aug 2018 – Feb 2022 · Remote

- Senior Full-Stack Engineer, Otus (Sep 2021 – Feb 2022) — led the migration of Login, Sign-up, and User-Management to a micro-frontend architecture for independent deploys.
- Lead Software Engineer, Airvel (Feb – Oct 2019) — built the B2B flight marketplace full-stack: Angular, Node.js + Apollo Federation GraphQL, and Stripe Card + ACH payments.
- Front End Developer, axialHealthcare (Aug 2018 – Jan 2019) — clinician-facing Angular features for opioid-addiction case management.

Angular · Micro-frontends · Node.js · Apollo GraphQL · Stripe

Lead Frontend Engineer — Metova, Inc.

2015 – 2018 · Franklin, TN

- Led an 8-engineer team re-architecting the SiriusXM web player (AngularJS → Angular) for live audio & video streaming.
- Raised code coverage from 0% to 80% (Jasmine / Karma), cutting sprint bug rates from ~70% to under 20% — growing from intern to team lead in three years.

Angular · TypeScript · Streaming Media · Jasmine / Karma · Rails

SKILLS

Angular · TypeScript · Node.js · RxJS · Next.js · GraphQL · Rails · AWS · PostgreSQL · Playwright · RAG / LLMs · Stripe

EDUCATION

Tennessee Technological University — Business Information Systems
